DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record is seen to disclose or suggest the limitation of claim 1 that an abutment member including a projecting guide member for guiding the sealing strip towards the neck finish as the closure is applied, so that a strength of the seal is increased, wherein the guide member contacts the sealing strip over a relatively small area so that a friction between the sealing strip and the abutment member is minimized and wherein the sealing strip is inclined radially towards the neck finish for improving the sealing effect. For example, the closest reference found, Dutt, teaches a plastic closure cap with sealing flanges but does not teach an abutment member including a projecting guide member for guiding the sealing strip towards the neck finish as the closure is applied, so that a strength of the seal is increased, wherein the guide member contacts the sealing strip over a relatively small area so that a friction between the sealing strip and the abutment member is minimized and wherein the sealing strip is inclined radially towards the neck finish for improving the sealing effect.

None of the prior art of record is seen to disclose or suggest the limitation of claim 15 that a guide member projecting towards the sealing strip for guiding the sealing strip towards the neck finish as the closure is applied, so that a strength of the seal is increased, wherein the guide member contacts the sealing strip over a relatively small area so that a friction between the sealing strip and the abutment member is minimized and wherein the sealing strip is inclined radially towards the neck finish for improving

the sealing effect. For example, the closest reference found, Dutt, teaches a plastic closure cap with sealing flanges but does not teach a guide member projecting towards the sealing strip for guiding the sealing strip towards the neck finish as the closure is applied, so that a strength of the seal is increased, wherein the guide member contacts the sealing strip over a relatively small area so that a friction between the sealing strip and the abutment member is minimized and wherein the sealing strip is inclined radially towards the neck finish for improving the sealing effect.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
